

COURSE SLO ASSESSMENT REPORT, SCC

Department: CMPR

Course: 100

Year: 2013

Semester: Fall

1) Outcome to be assessed	2) Means of assessment and criteria of success	3) Summary of data collected	4) Analysis of data	5) Plan of action/what to do next
Students will be able to identify and understand the uses of basic components of computers, computer systems, computer networks, and computer information systems.	Final exam. 70% is considered a success.	121 students completed the four sections of CS100. Results show that 78% of the students received a "C" or better on the final exam.	This is about average for the introductory class in computing. Over that past 5 semesters, the range of these results is between 70 and 81%.	Nothing. These results are consistent with past semesters.
Students will understand and use appropriate vocabulary pertaining to computers.	Projects & Activities	Over 81% of the students received full credit for their Office projects and their short writing activities that are based on current issues & developments in the field.	These results are actually better than expected as compared to last year.	We plan to add another project that will require more research in order to better evaluate this standard.
Students will develop a high degree of awareness of the implications of technology in today's society.	Exam 1	Results show 77% of the students who completed the course received a "C" or better on the first exam which covers How Computers Influence Society.	Given this is the first exam of the semester, we believe the findings are consistent with other general education courses at the CCC level for entry-level students.	No plan at this time.
